Session 6 — Student Activity Worksheet

Lecture 12 — Program for Self-regulation and Health

Name	SHASHWAT KUMAR	**Reg. No.**	RA2511003011035
Branch	CSE-CORE/Q1	**Date**	30th August 2026

Session Learning Outcomes

By the end of this session, you should be able to:

- Explain that health in the body is a natural outcome of the feeling of self-regulation in the Self.
- State the program for health in priority order: (1) Intake & Routine, (2) Labour & Exercise, (3) Postures & Regulated Breathing, (4) Medicine & Treatment.
- Distinguish staying healthy, bringing the body back to harmony, and dependence on a drug/machine.
- Distinguish self-regulation from self-control / self-restraint.

How to Engage with this Worksheet

- Whatever is stated here (and in the lecture) is a proposal — do not assume it to be true or false.
- Verify it on your own right, on the basis of your natural acceptance, and validate it in your living.
- Treat each question as a dialogue: first between you and the material, and then within your own Self — between what you are and what you really want to be.

Part A — Key Ideas (Recap)

- The Body is an orderly system (a harmony) with definite conduct — cells work together in harmony, forming tissues, organs and organ systems. With a feeling of self-regulation, the Self ensures the continuity of harmony in the body (at least it does not disturb it). Health is the natural outcome of self-regulation.
- Program for health, in priority order: (1) Intake (food, water, air, sunlight…) and Routine/lifestyle; (2) Labour and Exercise; (3) Postures for regulating internal & external body organs (e.g. yoga) and Regulated breathing (e.g. pranayam); (4) Medicine and Treatment. This is a program for health, not the only program for health.
- Purposes: (A) for staying healthy; (B) for bringing the body back to harmony from temporary disharmony; (C) dependence on a drug/machine to perform a body function.
- Intake should be nutritious, digestible, tasty and such that the waste is excretable; water in the right amount and time; daily fresh air and sunlight. The circadian rhythm, the rhythm of seasons and the body's lifecycle rhythm help set up a harmonious routine.
- Labour produces physical facility (e.g. sweeping, kitchen gardening, cycling to college); exercise does not produce physical facility (e.g. jogging, gym work). Medicine (home

remedies / integrated systems) brings the body back to harmony; treatment uses a drug/machine to perform a body function (dependence).

Part B — In-Class Activity

Activity 1 — Match the program level to its purpose

For each level of the program, write its purpose: A (staying healthy), B (back to harmony from temporary disharmony) or C (dependence).

Program level	Purpose (A / B / C)
Intake & Routine (lifestyle)	A
Labour & Exercise	A
Postures & Regulated Breathing	A/B
Medicine (home remedies / integrated systems)	B
Treatment (drug / machine performing a body function)	C

Activity 2 — Labour or Exercise?

Mark each activity as Labour (produces physical facility) or Exercise (produces none).

Activity	Labour / Exercise
Sweeping and swabbing your room / house	Labour
Kitchen gardening	Labour
Cycling to college and back	Labour
Jogging outdoors	Exercise
Weight training in a gym	Exercise
Exercise cycling in a gym	Exercise

Activity 3 — A self-regulated daily schedule

Approximately how much time would you allocate each day for keeping the body in good health through:

- Healthy intake (food, air, water, sunlight): _____1.5 Hours_____
- Upkeep of the body (sleep/wake, excretion, bathing): _____8 Hours_____
- Labour (production of physical facility): _____1 Hour_____
- Balancing internal & external organs (postures): _____0.5 Hours___
- Regulated breathing: _____0.5 Hours_____
- Do you think this schedule makes you more or less productive? What do you conclude?

  This schedule increases overall productivity by preserving bodily harmony and reducing time lost to illness.

Part C — Long-Answer Questions

Answer in your own words, verifying each point on the basis of your natural acceptance.

Q1. Why is health described as a “natural outcome” of the feeling of self-regulation? Explain self-regulation and health. **[5]**

Health is a natural outcome of self-regulation (*sanyam*) because taking responsibility for the body ensures it receives appropriate intake, exercise, and care, allowing its natural self-organizing mechanisms to maintain internal order.

Q2. State the program for health in priority order, and explain each level briefly. **[5]**

The health program in priority order is: (1) *Intake & Routine* (nutritious intake, balanced lifestyle), (2) *Labour & Exercise* (physical work and movement), (3) *Postures & Regulated Breathing* (internal harmony like yoga/pranayam), and (4) *Medicine & Treatment* (restoring order when disharmony occurs).

Q3. Distinguish labour from exercise, giving examples of each. **[5]**

Labour refers to physical effort that produces tangible physical facilities or utility (e.g., gardening, sweeping). Exercise refers to physical exertion that maintains body fitness without producing physical goods (e.g., gym weightlifting).

Q4. How is self-regulation different from self-control or self-restraint? **[5]**

Self-regulation (*sanyam*) comes from an internal feeling of responsibility toward the body based on right understanding. Self-control or restraint relies on forcibly suppressing desires without true internal clarity, which often creates internal tension.

Q5. Recall the times in the last three years your body has been ill; what steps restored harmony? Design a daily schedule with a strong feeling of self-regulation, and state whether you think it makes you more or less productive. **[5]**

Past illnesses were addressed by modifying intake and getting rest to restore harmony. Designing a structured daily schedule allocated for proper routine, balanced intake, and basic labor enhances energy levels and overall productivity.

Self-Reflection (Take-Home)

- For your food: is it nutritious? Is the waste excretable? Are you trying to fetch happiness from the taste? (Slide 31)
- For your clothes: are they appropriate for the season? Are you trying to get respect from others on the basis of clothes? (Slide 32)
