21LEM202T — Unit 4, Session 1, SLO 2

Part A — Key Ideas of the Session

1. What are the four orders of nature? Give one example of each.

Physical order: soil, metal

Bio order: plants, trees

Animal order: animals, birds

Human order: human beings

2. Define 'Mutual Fulfilment' in the context of nature.

Mutual Fulfilment = Relatedness + Fulfilment. It means the orders are interconnected and interdependent, cyclic, and every unit is enriched.

3. Which orders are mutually fulfilling for one another and enriching for the Human order?

The Physical, Bio, and Animal orders are mutually fulfilling for one another and enriching for the Human order.

4. What is the natural acceptance of human beings?

Human beings have a natural acceptance to be mutually fulfilling.

5. Fill in the blanks: The presence of Self (I) is indicated by the activity of **Assuming**. Physical & Bio orders have only **Recognizing** and **Fulfilling** (no Self). Animal order has **Assuming**, **Recognizing**, **Fulfilling** (Self + Body). Human order has potential for **Knowing**, **Assuming**, **Recognizing**, **Fulfilling** (Self + Body).

6. Which order has a definite conduct? Which order may lack definite conduct?

All orders have a definite conduct except the human order without right understanding. The human order without right understanding lacks definite conduct.

7. What is the source of indefiniteness and problems in the human being?

The Self (I) operating on assuming without knowing is the source of indefiniteness and problems.

8. What is the solution to ensure knowing (understanding harmony)?

Human education-sanskar is essential.

9. Give two examples of present-day problems due to lack of understanding.

Resource depletion (resources used faster than nature produces them) and pollution (the product does not return to the natural cycle, or is produced faster than it can return).

10. Arrange the four orders in increasing quantity of units.

Human << Animal << Plant << Physical

11. What is the role of the human being in nature?

To realise the mutual fulfilment (harmony) that is already inherent in nature: (1) understand that it is inherent, and (2) live accordingly; then the mutual fulfilment among the four orders is realised.

Part B — In-Class Activity

1. Observe the surroundings (classroom, campus, or your home) and list at least 5 units from each of the four orders. Write them in the table below.

Physical	Bio	Animal	Human
Chair	Plant	Dog	Student
Table	Tree	Bird	Teacher
Wall	Grass	Cat	Security Guard
Floor	Flower	Ant	Cleaner
Metal	Bush	Squirrel	Visitor

2. For each order, write the activities that are present (Recognizing, Fulfilling, Assuming, Knowing). Use the table below.

Order	Activities Present
Physical	**Recognizing, Fulfilling**
Bio	**Recognizing, Fulfilling**
Animal	**Assuming, Recognizing, Fulfilling**
Human	**Knowing, Assuming, Recognizing, Fulfilling**

3. Based on the activities, which orders have Self (I)? Write your answer.

Animal and Human orders have Self (I), as indicated by the activity of Assuming. Physical and Bio orders do not have Self.

4. Discuss in pairs: How does the human order depend on the other three orders? Write at least two points.

1. Humans depend on the Physical order for resources like air, water, and minerals.
2. Humans depend on the Bio order for food, oxygen, and medicines.
3. Humans depend on the Animal order for food, labor, and ecological balance.

Part C — Long-Answer Questions

1. Explain the concept of mutual fulfilment among the four orders of nature. Give an example of how the orders are interconnected and interdependent.

Mutual fulfilment means that the four orders are related and each enriches the others in a cyclic manner. For example, plants (Bio) use sunlight and soil (Physical) to grow, animals (Animal) eat plants and return nutrients to the soil through waste, and humans (Human) depend on all for survival while having the potential to enrich them through right understanding. This interconnectedness ensures that every unit is enriched and the cycle continues.

2. Why is the human order said to be 'not fulfilling' for the other orders without right understanding? Explain with reference to resource depletion and pollution.

Without right understanding, humans exploit nature for short-term gains, leading to resource depletion (using resources faster than they are produced) and pollution (producing waste that does not return to the natural cycle). This disrupts the mutual fulfilment that would otherwise exist, making the human order harmful to the other orders. With right understanding, humans can act to enrich and protect nature, restoring harmony.

3. Describe the role of the human being in maintaining harmony in nature. What two steps are necessary?

The role of the human being is to realise the mutual fulfilment that is already inherent in nature. The two necessary steps are: (1) understand that harmony is inherent and does not need to be created, and (2) live accordingly by ensuring enrichment, protection, and right utilisation of nature. This leads to the realisation of mutual fulfilment among all four orders.

4. Differentiate between the activities of the four orders using a table. Include the presence or absence of Self

(I).

Order	Activities	Self (I)
Physical	Recognizing, Fulfilling	**Absent**
Bio	Recognizing, Fulfilling	**Absent**
Animal	Assuming, Recognizing, Fulfilling	**Present**
Human	Knowing, Assuming, Recognizing, Fulfilling	**Present**

5. What is the significance of 'human education-sanskar' in ensuring harmony?

Human education-sanskar is essential because it cultivates right understanding and knowing in the Self. Without it, humans operate on assumptions, leading to indefiniteness and problems. With proper education-sanskar, humans can understand harmony and act in a way that is fulfilling for all orders, thus maintaining harmony in nature.

Self-Reflection (at home)

1. Reflect on a time when you acted without right understanding and caused harm to nature. What could you have done differently?

Once I threw a plastic bottle in the trash instead of recycling it, contributing to pollution. I could have recycled it or reduced my use of plastic. With right understanding, I would have recognised the impact on the natural cycle and chosen a more sustainable option.

2. How can you contribute to the mutual fulfilment of the four orders in your daily life? List at least three actions.

1. Reduce, reuse, and recycle to minimise waste and resource depletion.
2. Plant trees and maintain green spaces to support the Bio order.
3. Treat animals with care and respect their role in the ecosystem.
4. Educate myself and others about sustainable living and harmony in nature.

Part B — In-Class Activity

Activity B1: Classify each unit below into one of the four orders (Physical / Bio / Animal / Human). Give a one-line reason where asked.

1. Water ————————
2. Human being ————————
3. Mosquito ————————
4. Mango tree ————————
5. Grass ————————
6. Moon ————————
7. Animal Body ————————
8. Human Body ————————

1. Water — Physical order (non-living, material)
2. Human being — Human order (has consciousness and natural acceptance)
3. Mosquito — Animal order (has consciousness but no natural acceptance)
4. Mango tree — Bio order (has life but no consciousness)
5. Grass — Bio order (has life but no consciousness)
6. Moon — Physical order (non-living, material)
7. Animal Body — Animal order (part of animal, has consciousness)
8. Human Body — Human order (part of human being, has consciousness and natural acceptance)

Part C — Long-Answer Questions

Q1. Nature is a collection of units that can be categorised into four orders. Name the four orders with one example of each, and state the characteristic activity associated with each order. (5 marks)

The four orders are:

- Physical order: e.g., soil, water, air — characteristic activity: composition/decomposition (material change)
- Bio order: e.g., plants, trees — characteristic activity: selection/growth (taking nutrients, growing, reproducing)
- Animal order: e.g., animals, birds — characteristic activity: selection based on sensation (fulfilling physical needs)
- Human order: e.g., human being — characteristic activity: selection based on right understanding (using intellect and natural acceptance)

Q2. Explain what is meant by 'mutual fulfilment' in nature. Why is the human being (without right understanding) said to be not fulfilling for any of the four orders, and what is required for the human being to become fulfilling for all four? (5 marks)

Mutual fulfilment in nature means that every unit in nature participates in a relationship of giving and taking with other units, ensuring the harmony and continuity of the whole. Each order supports the others in a cyclic, self-sustaining manner. Without right understanding, the human being acts based on false assumptions and greed, exploiting nature and other humans, thus not fulfilling its role in any order. To become fulfilling, the human being must develop right understanding of the self, others, and nature, and live in accordance with natural acceptance, which leads to responsible and harmonious actions.

Q3. "All orders have definite conduct except the human order without right understanding." Explain this statement, identifying the source of indefiniteness in the human being and the proposed solution. (5 marks)

The physical, bio, and animal orders follow fixed, predictable patterns of behaviour (e.g., physical laws, biological cycles, animal instincts), so their conduct is definite. The human order, however, has the freedom to choose; without right understanding, humans act arbitrarily, driven by desires and false beliefs, leading to indefinite conduct. The source of indefiniteness is the lack of right understanding of the self and nature. The proposed solution is to develop right understanding through self-exploration and education, aligning one's thoughts and actions with natural acceptance, which is definite and universal.

Self-Reflection (Take-Home)

• What are your assumptions about nature? Is it for human enjoyment, or does the human being have a role to play for harmony in nature?

• In a typical day, how much time do you interact with the physical, bio, animal and human orders? What is the nature of that interaction (taking, giving, appreciating, fulfilling a responsibility...)?

• How do you and your family contribute to / participate in maintaining the order (harmony) in nature?

• Can you see that units of the physical, bio and animal orders have a definite conduct? Can you see that if the conduct of a human being is in accordance with their natural acceptance, then it too will be definite (because the natural acceptance is definite)?

• Assignment: mention any five programmes each — as an individual, as an organisation, and as a part of society — that you can take up to ensure mutual fulfilment with Nature.

• I assume nature is not just for human enjoyment but a system we are part of; we have a responsibility to maintain its harmony.

• I interact with the physical order (using water, electricity) for about 2 hours, bio order (eating plants) for 1 hour, animal order (seeing pets) for 30 minutes, and human order (talking to family/friends) for 3 hours. Interactions are mostly taking, but I also appreciate and sometimes give back (e.g., watering plants).

• My family and I reduce waste, recycle, plant trees, and use resources mindfully, contributing to nature's balance.

• Yes, I can see that physical, bio, and animal orders follow definite patterns. If a human acts according to natural acceptance, which is definite, then their conduct will also be definite and harmonious.

• Assignment:

- As an individual: 1) Reduce water usage, 2) Plant a tree, 3) Use public transport, 4) Avoid single-use plastics, 5) Practice gratitude towards nature.

- As an organisation: 1) Implement recycling programs, 2) Use renewable energy, 3) Conduct environmental awareness workshops, 4) Adopt sustainable procurement, 5) Reduce carbon footprint.

- As a part of society: 1) Participate in community clean-ups, 2) Support green policies, 3) Promote organic farming, 4) Educate others about harmony, 5) Advocate for wildlife protection.
